SkillMatch AI

Lean Canvas / Career skill-gap analysis

SDG 4 · QUALITY EDUCATION

SDG 8 · DECENT WORK

01 PROBLEM

- Learners may struggle to translate role requirements into a focused learning plan.
- Skill terminology varies across job and internship descriptions.
- A quick, transparent comparison can help make next steps clearer.

02 SOLUTION

- Enter skills, tools, coursework and projects in plain text.
- Choose from five role templates; optionally paste a job description.
- Review matched and unrecognised requirements, a roadmap and downloadable reports.

03 UNIQUE VALUE

- “See what your target role asks for - then choose what to practise next.”
- A low-friction, explainable skill-gap review rather than a black-box hiring score.

04 ADVANTAGE

- No defensible advantage has been proven yet.
- Potential differentiators: transparent matching, a reviewed role map, and feedback-led improvements.

05 CUSTOMERS

- Primary: university students and early-career applicants preparing for internships or entry-level roles.
- Secondary: campus career clubs, mentors and placement teams as potential reviewers or adopters.

EXISTING ALTERNATIVES

- Manual job-description review and personal spreadsheets.
- Generic career websites, course lists and peer advice.

KEY METRICS

- Recognition precision and missed-synonym rate from manually reviewed profiles.
- Task completion, time to make a plan, and user-rated clarity/usefulness.

HIGH-LEVEL CONCEPT

- A checklist builder for career readiness: map skills, compare requirements, plan practice.

CHANNELS

- Current: deployed Streamlit demo and GitHub project.
- Potential: campus demos, career clubs and placement teams.

EARLY ADOPTERS

- Students preparing for data, ML and software internships.
- Learners who want to structure a portfolio or internship preparation plan.

COST STRUCTURE

- Developer time and catalogue maintenance; basic hosting; testing and feedback sessions.
- Future costs may include accessibility, localisation, reviewed content and evaluation.

REVENUE STREAMS

- Current prototype: no revenue model or willingness-to-pay evidence.
- Possible future models to test: institutional licensing or tailored reporting - only after value and demand are validated.

Assumptions to validate: relevance of catalogue skills, usefulness of roadmaps, and institutional demand. Text similarity is not hiring probability.
