SkillMatch AI — Lean Canvas

SDG 4: Quality Education | SDG 8: Decent Work and Economic Growth

1. PROBLEM	*2. CUSTOMER SEGMENTS*	*3. UNIQUE VALUE PROPOSITION*	*4. SOLUTION*	*5. UNFAIR ADVANTAGE*
Students may struggle to identify the skills expected for a target role. Job descriptions can be difficult to turn into a learning plan. Alternatives: manual review, spreadsheets, generic career sites.	Primary: university students and early-career applicants. Secondary: placement cells, career clubs, mentors. Early adopters: students preparing for internships.	**Turn a target role into a clear next-step learning plan.** An explainable skill-gap tool that runs without a paid API or large dataset.	Enter skills; select a role or paste a job description; compare text with TF-IDF/cosine similarity; show recognized matches, catalogue gaps, and roadmap.	No defensible moat established yet. Potential differentiation: transparent local processing, reviewed role-skill map, and feedback-informed roadmaps. Validate with users.
6. KEY METRICS	***7. CHANNELS***	***8. COST STRUCTURE***	***9. REVENUE STREAMS***	***10. HIGH-LEVEL CONCEPT***
Task completion; user-rated roadmap usefulness; catalogue coverage; repeat use; missed-skill and recognition errors.	College placement cells; student clubs; career workshops; portfolio demos; internship preparation communities.	Development and maintenance; hosting; content review; optional future domain or hosting costs.	Possible future options: free student tool; college license; paid customization/reporting. Willingness to pay is unvalidated.	A career-readiness assistant mapping student-provided skills to target-role requirements and suggesting learning steps. Not a hiring decision tool.

Assumptions to validate: users find the skill map relevant; recognized skills reflect text supplied; roadmap is useful; institutions may adopt the tool. Similarity is not hiring probability.
